Category:Powerpoint Category:Microsoft OfficeQ: Hibernate: persisting one-to-one relationships while using inherited type for

the persisted class I have the following domain model: @Entity
@Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Animal { @Id @GeneratedValue(strategy =
GenerationType.IDENTITY) private Long id;
@ManyToOne(targetEntity = Address.class) @Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
private Address address; ... } @Entity @Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Mammal extends Animal { ... } @Entity
@Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Bird extends Animal { ... } @Entity @Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Fish extends Animal { ... } @Entity @Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Amphibian extends Animal { ... } @Entity
@Cache(usage =
CacheConcurrencyStrategy.NONSTRICT_READ_WRITE)
public class Reptile extends Animal { ... } I would like to be able
to save instances of "Animals" and "Mammals" in a single
collection with "Address", and have this address reference the
actual physical address of the animal, and later query for all the
animals associated with one particular address. In this setup,
Hibernate incorrectly tries to save the animals with their "id", so
